Q1:

Retrieve all information about the current tenants for a given apartment complex.

Answer:

select

 company.companyName as Company_Name,

 properties.address as address,

 residences.resId as resNumber,

 tenants.tenantName as tenantName,

 tenants.phoneNumber as tenantPhoneNumber,

 tenants.email as tenantEmail,

 residences.mortgage as rent_Amount

from tenants

 inner join tenantHistory on tenants.tenantId = tenantHistory.tenantID

 inner join residences on residences.resId = tenantHistory.resNumber

 inner join properties on residences.propertyId = properties.propertyId

 inner join company on properties.companyId = company.companyId

where properties.propertyId = 6 and tenantHistory.moveOutDate is null;

Final Exam: COMS-3233

Student Name:

Points: 3*10=30 Section:

```

141 • select
142     company.companyName as Company_Name,
143     properties.address as address,
144     residences.resId as resNumber,
145     tenants.tenantName as tenantName,
146     tenants.phoneNumber as tenantPhoneNumber,

Q3:

List the companies along with the count of 'House' properties owned by each company. Include columns 'CompanyName', 'Type' and 'Counts' in your result.

Company Name	Type	Unit Counts
Company 1	House	x
Company 2	House	x
Company 3	House	x

Answer:

select

company.companyName as companyName,

properties.propertyType as propertyType,

count(propertyType) as UnitCounts

from company

inner join properties on properties.companyId = company.companyId

group by companyName, propertyType

having propertyType = 'House';

```

154
155 • select
156     company.companyName as companyName,
157     properties.propertyType as propertyType,
158     count(propertyType) as UnitCounts
159 from company
160 inner join properties on properties.companyId = company.companyId
161 group by companyName, propertyType
162 having propertyType = 'House';
163
164

```

Result Grid	Filter Rows:	Export:	Wrap Cell Content:
companyName	propertyType	UnitCounts	
Google	House	1	
Intercontinental Hotels Group	House	1	
Lincoln Property Company	House	1	

I added a house to change the query and ran it again through this.

select

company.companyName as companyName,

properties.propertyType as propertyType,

count(propertyType) as UnitCounts

from company

inner join properties on properties.companyId = company.companyId

group by companyName, propertyType

having propertyType = 'House';

insert into properties(companyId, propertyType, address) values

(1, 'House', '305 Acacia Street');

Final Exam: COMS-3233

Student Name:

Points: 3*10=30 Section:

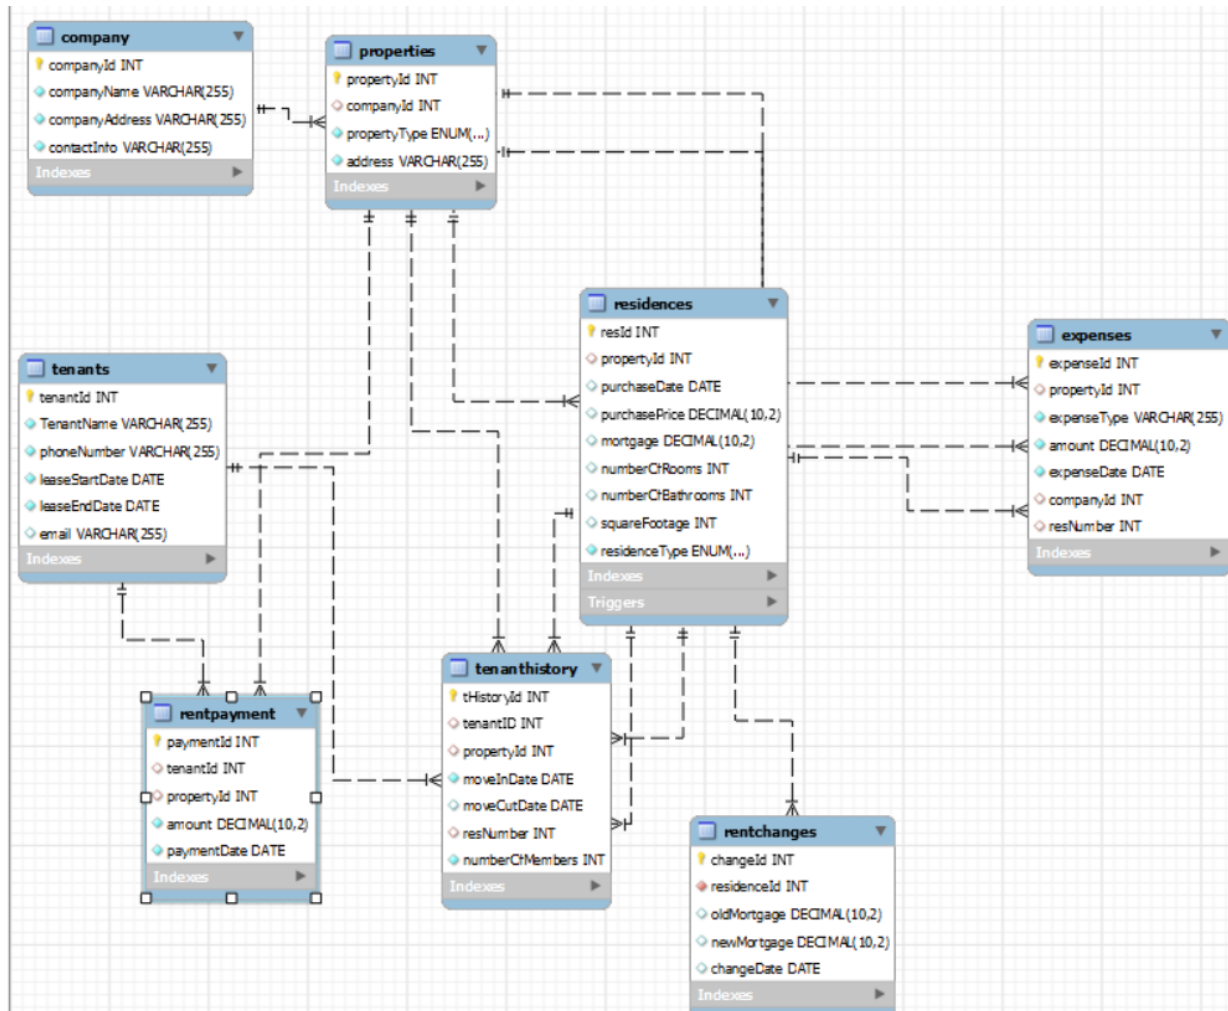

insert into residences(propertyId, purchaseDate, purchasePrice, mortgage, numberOfRooms, numberOfBathrooms, squareFootage, residenceType) values

(7, '2020-03-28', 280000, 1750, 5, 3, 2200, 'House')

```
155 • select
156     company.companyName as companyName,
157     properties.propertyType as propertyType,
158     count(propertyType) as UnitCounts
159 from company
160 inner join properties on properties.companyId = company.companyId
161 group by companyName, propertyType
162 having propertyType = 'House';
163
164 • insert into properties(companyId, propertyType, address) values
165     (1, 'House', '305 Acacia Street');
166 • insert into residences(propertyId, purchaseDate, purchasePrice, mortgage, numberOfRooms, numberOfBathrooms, squareFootage, residenceType) values
167     (7, '2020-03-28', 280000, 1750, 5, 3, 2200, 'House')
168
```
